

Hellroaring Hut Guidelines & Rules

*****Due to previous issues, we cannot allow dogs, regardless of service animal designation*****

Wood Stove: Wood has already been cut for your trip so there is no need to use the chainsaw whatsoever. Don't leave the stove un-attended; it's generally not safe and wasteful. At the trip end, use the extra bucket and shovel to clean ashes from the stove. These need to be disposed of by the toilet facility. There is plenty of wood to burn so your group can be comfortable but it still requires plenty of work to gather, be considerate and don't have any bonfires.

Cooking w/ Propane Stove: Propane is tough to haul into the hut so only use what is necessary. Please **don't melt snow with propane**, there is a spring nearby making this a futile and wasteful task. The wood stove melts snow and boils water well, it also keeps food items warm. **Turn the propane tank off when the stove is not in use.** Open the windows all the way while cooking for good airflow to prevent condensation and moisture buildup, especially while boiling water.

Toilet Facility: Your guide will go through the restroom facility with your group on arrival. Guests must use the provided facility when in camp, **facilities do not need to be used if it guests are ¼ miles from the hut or more, please be considerate of others.**

Garbage: Combustible garbage is welcome to be burned in the stove. Everything non-combustible needs to be hauled out. There is a garbage bucket with a liner under the table.

First Aid/Emergencies: There is a well-stocked and highly visible first aid kit located in the black backpack. Please note any used or missing items at the trip end so they can be replaced. A Garmin InReach satellite messenger is available for emergency use at the hut. The fastest way out is usually the way your group came in. Emergency numbers are listed below. Instructions for a helicopter rescue, and contact information to facilitate one are included with the other equipment. In some areas a snowmobile rescue might be feasible but should not be relied upon. There is a compact "rescue bubble" sled for building a rescue toboggan.

Hut Condensation: Due to the impervious nature of the hut, condensation can become an issue. Open all windows and the door while cooking. If your group is large consider leaving a window ½ way open for ventilation at night. Leave the windows all the way open during the day, and when you leave so things air out.

Departure Cleaning:

- **empty water containers** (so they don't freeze solid) (metal pots are ok)
- clean dishes
- pack out any leftover food (remaining food attracts critters, please don't leave extra)
- wipe down the table/cloth
- open the windows
- turn off the lights

Cooking Equipment Already at the Hut

- | | |
|-------------------------------|-----------------------------|
| ▪ 8-mugs/plates/bowls | ▪ 2 Burner 15,000 BTU stove |
| ▪ 8-forks/spoons/knives | ▪ 2-frypan/skillets |
| ▪ 1 x 10" aluminum dutch oven | ▪ 1-french press (coffee) |
| ▪ 2 quart pot w/ lid | ▪ 2-spatula/flippers |
| ▪ Large Coffee Pot (1.5 gal) | ▪ 1-can opener |
